May 2026

# Project Overview

- Workforce Analytics Solution
- Employee Attrition Analysis
- Compensation Analysis
- Workforce Insights
- Advanced Analytics using Python

# Business Objective

To develop an end-to-end HR analytics solution that enables organizations to analyze workforce trends, employee attrition, compensation patterns, and satisfaction metrics through automation, interactive dashboards, and advanced analytics.

# Dataset Overview

| Metrics         | Value                    |
|-----------------|--------------------------|
| Employees       | 1470                     |
| Departments     | 3                        |
| Variables       | 35+                      |
| Target Variable | Attrition                |
| Data Source     | IBM HR Analytics Dataset |

# Executive Summary Dashboard

# Workforce Insights Dashboard

# Compensation & Attrition Analysis

# Employee Correlation Matrix

# Key Findings

- Employee tenure positively correlates with salary
- Attrition varies across departments
- Overtime influences attrition
- Job satisfaction has weaker correlations

# Recommendations

- Improve retention programs
- Reduce overtime burden
- Enhance employee engagement
- Implement predictive HR analytics

# Thank You

Questions?

*Thank you for your time and consideration.*
